# **VA 521 -** Compact inline flow sensor for compressed air and other types of gas

## No inlet section necessary – integrated flow straightener – sensor unit removable

The newly developed VA 521 combines modern digital interfaces for connection to energy monitoring systems with a small, compact design. The VA 521 is always used when many machines (compressed air consumers) are to be integrated into an energy monitoring network

Readout values in the display can be rotated by 180°, e.g. for overhead installation

## Display shows 2 values at the same time:

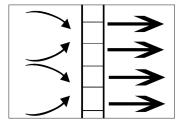

- Present flow in m³/h. l/min....
- Total consumption (counter reading) in m³, I, kg
- · Temperature measurement

#### Screw-in thread:

Easy installation into the existing pipe due to integrated measuring section (suitable for 1/2", 3/4", 1", 1 1/4", 1 1/2" or 2" lines)

#### Advantages at a glance:

- Compact, small design for use in machines, behind maintenance unit on the end user
- All interfaces are freely programmable via the display
- Modbus-RTU output
- 4...20 mA analogue output for present flow
- Pulse output total flow (counter reading), electrically isolated. Optional: M-Bus, Ethernet interface or PoE

Integrated flow straightener - no inlet section necessary

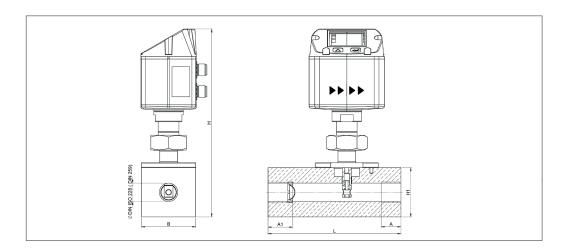

With a key stroke:

- Reset counter reading
- · Select units
- Parameterise interfaces

The sensor can be removed from the measuring section and cleaned.
