

**Thermal flow sensor TA Di Ex-d with integrated, configurable transducer UTA in a flameproof enclosure for applications in explosive atmospheres**

Sensor TA Di Ex-d

**Measured variables**

- standard flow rate [m<sup>3</sup>/h, l/min], mass flow rate [kg/h], standard velocity [m/s]
- standard basis adjustable, default:  
temperature  $t_n = +21\text{ °C}$   
pressure  $p_n = 1014\text{ hPa}$

**Functional principle**

- flow measurement according to the heat transfer method
- temperature-compensated

**Design**

- measuring tube with integrated transducer and flameproof enclosure
- thin film sensor element

**Media**

- pure gases, gas mixtures: air, nitrogen, methane, natural gas, hydrogen, argon, carbon dioxide, helium, sulphur hexafluoride, propane, landfill gas, ...
- calibration can be carried out with a multitude of gases or gas mixtures to achieve the best measuring uncertainty

**Advantages**

- applications in explosive atmospheres:  
Ca0tegrory 1/2 G (Zone 0/1) and Category 1/2 D (Zone 20/21)
- high turndown (up to 1 : 1000)
- measuring range from 0.2 m/s
- low measurement uncertainty, even at lowest flow rates
- mass flow of air/gases without additional pressure and temperature detection
- no moving parts
- stainless steel sensor housing
- wider temperature and pressure resistance ranges
- low installation costs
- marginal pressure loss
- high durability
- sterilisable (material-resistance of sensor allowing)
- easy adjustment of parameters with HART<sup>®</sup> interface

**Examples of application**

- measuring
  - in explosive atmospheres
  - air flow rate
  - compressed air and gas consumption as well as leakage flow
  - in exhaust air
  - landfill gas
  - natural gas
  - in process gases
  - in burner control units
  - in air in low vacuum range with pressures higher than 200 hPa abs

**Particles, humidity and condensation**

- dust or fibre particles in the gas do not affect the measurement, as long as these are not abrasive or accumulate on the sensor
- deviations in values as a result of variable air humidity under normal atmospheric conditions are covered by the measuring uncertainty specifications

**Model designation / order code (example)**

\* all standard flow and standard velocity details pertaining to normal pressure  $p_N = 1014 \text{ hPa}$  and normal temperature  $t_p = +21 \text{ °C}$  (294.15 K)

## Measurement uncertainty / time constant

measurement uncertainty for flow rates NV/t with 1014 hPa and +21 °C  
 less than/equal to 40 m/s : 2 % of measured value + 0.02 m/s  
 greater than 40 m/s : 2.5 % of measured value  
 time constant : in seconds

## Storing a characteristic for application in other gases

based on	Article No.
calibration in air and conversion of the air characteristic for another gas, up to '60 m/s'	TA_TRANSFO (on request)
real gas calibration for achieving best measurement uncertainty	(on request)

### (6) Permissible temperature

medium	-10 ... +140 °C
ambient	-20 ... +50 °C

### Permissible ambient and media temperature ranges subject to the chosen temperature class. Ambient temperature (electronics) $T_U$ , media temperature $T_M$

Category 1/2G equipment		
Temperature class	$T_M$	$T_U$
T4	- 10 °C ... +60 °C	- 20 °C ... +50 °C
T3	- 10 °C ... +60 °C	- 20 °C ... +50 °C
Category 2G equipment		
Temperature class	$T_M$	$T_U$
T4	- 10 °C ... +130 °C	- 20 °C ... +50 °C
T3	- 10 °C ... +140 °C	- 20 °C ... +50 °C
T2	- 10 °C ... +140 °C	- 20 °C ... +50 °C
T1	- 10 °C ... +140 °C	- 20 °C ... +50 °C
Category 1/2D or 2D equipment		
maximum surface temperature		$T_U$
T 135 °C		- 20 °C ... +50 °C

### (7) Working pressure

max. 16 bar / 1.6 MPa overpressure
higher than 16 bar / 1.6 MPa on request

### (8) Design

as in Drawing 6b, Page 1
--------------------------

### (9) ATEX protection

for gas	: Ⓜ II 1/2 G Ex ia/d e [ia] IIC T4 Ga/Gb
for dust	: Ⓜ II 1/2 D Ex ia/tb IIIC T135°C Da/Db
sensor	: Category 1 (Zone 0 or 20)
transducer housing	: Category 2 (Zone 1 or 21)

### Installation position

any positioning under atmospheric pressure, with overpressure inflow must not come from above
---

**Ex-d transducer housing**

Dimensions	outside diameter/length/height: approx. 110/205/182 mm
material	aluminium cast alloy max. 0.5 % Mg, coated
Protection	IP68, IEC 529 and EN 60 529
Connection	glands for shielded cables with outside diameter 5 ... 9 mm, contacting of overall screen on the ground terminal in the housing
Alignment	rotatable by approx. 350 ° and lockable
Setup	dual chamber system consisting of: 1) electronics in Ex-d protection (flameproof enclosure) 2) connections in Ex-e protection (increased safety) with terminal block and cable glands

**Electromagnetic Compatibility (EMC)**

according to EN 61 000-6-2 / IEC77

**Transducer UTA integrated in the connection housing**

Analog output flow	4 ... 20 mA resistance max. 500 Ohm
Output limit value or quantity pulse	potential-free relay contact (normally-open), max. 300 mA / 27 VDC
Communication port	HART®, via modem adapter for PC connection and PC software UCOM (see under Accessories) output signals are electrically isolated from the power supply
Self-monitoring	parameter settings, sensor interface; in the case of error: analog output < 3.6 mA
Power supply	24 V DC (20 ... 27 V DC)
Power consumption	less than 5 W
Setting parameters	analog output, time constant, profile factor, tube inside diameter, limit value or quantity pulse (rating adjustable), 'working pressure' to zero correction (only relevant for $N_v < 1$ m/s), standard basis, standard density

Ex-d transducer housing with optional LCD display

**Accessories (optional)**

	Description	Article No.
LCD display	1 <sup>st</sup> row: 'instantaneous value': flow rate or flow velocity 2 <sup>nd</sup> row: 'counter' or 'error code' 2 x 16-digit, character height 5.5 mm, working temperature range -20 ... +50 °C display rotatable in 90 °-stages on removing the Ex-d housing window cover	A010/520
calibration certificate v/TA		KLB
HART® modem adapter	for changing setting parameters, for PC-USB connection	A010/101
PC software UCOM	for configuring the UTA via RS232	A010/052
